POLICY CHANGE NOTICE:

In compliance with Policy Memorandum No: A-4-71, Department of Health, Education, and Welfare, Public Health Service, dated November 22, 1971, the practice of designating an entire State Plan for construction and modernization of health facilities by a particular fiscal year is hereby terminated. Beginning with this approved State Plan, the Plan and all portions thereof, will be considered in effect until it or any portion of it is revised. Revisions will be made by the State Agency in accordance with the legislative requirement that the State Agency will from time to time, but not less often than annually, review the State Plan and submit to the Secretary any modifications thereof which it considers necessary. To assure that the State Agency complies with this legislative requirement, it will submit at least annually Form HSM-126-1 (previously PHS-708-1). Any necessary modifications to the State Plan will accompany the Form HSM-126-1.

To facilitate maintenance of the State Plan document, this Plan is being prepared with pages punched for assembly in a three-ring binder. Thereafter, only those data which have been revised will be submitted to the Secretary for approval. Whenever changes have occurred in a service area, whether in terms of modernization need or capacity to provider service, the impact of such change will be shown on inventories, area and State summaries, as well as priority listings. This is essential for any service area scheduled for grant or loan support. All pages submitted to update the State Plan document will be numbered to correspond with the number(s) of the page(s) being replaced. They will also be dated and punched for insertion in the three-ring binder. Each transmittal letter will list the full number of changes made in the State Plan by service area and page number(s), in accordance with the attachments. Such changes, after approval of the Secretary, will be furnished to all recipients of the basic document.

At least thirty days prior to the submission of Form HSM-126-1 and State Plan modifications (if any), the State Agency will publicize the State Plan as required by Sec. 53.122(e) of the PHS Regulations. Existing requirements for review and comment by areawide planning councils and clearance by the Governor's office continue in effect.

Section 645(b) (3) of the Public Health Service Act requires that State Agencies give written notice to the Secretary of the maximum Federal share and the method for determining the actual Federal share for projects prior to approval of the first project in a state during any fiscal year. This requirement may be met by submission of Form HSM-126-1; however, if Form HSM-126-1 is not to be submitted by July 1 of any year, the State Agency will notify the Secretary on or before July of that year of its intentions regarding the Federal share to be used.

DISCUSSION:

For many years, there has been concern about the work involved in the development of a complete State Plan document each fiscal year. Beginning in Fiscal Year 1970, the concept of the "two-year" State Plan was initiated by HEW. This provided that State Agencies would make complete revisions of State Plans every second year, with only an updating of the facilities inventories and priorities done for interim years. In practice this has led to confusion. Only slightly more than half of all states have elected to do the "minimal revisions" while the remaining states have submitted complete State Plans each year as has been done by Montana.

Another problem was the lack of authorization to approve or fund projects in a new fiscal year until the "new" State Plan was approved. This practice delayed projects, thereby adding unnecessarily to their costs. With the State Plan being continuously effective until revised, this problem should be alleviated.

This policy is being instituted for the purpose of simplifying the preparation and maintenance of the State Plan. It permits the State Agency to determine when revisions of the State Plan are needed, and it provides that only those portions of the State Plan which are revised need to be submitted to the Secretary for approval. It also provides for the State Plan to be continuously in effect. It does not remove the necessity for the State Agency to revise and update the State Plan as such revisions are needed.

ANNUAL REVIEW OF STATE PLAN

(Hospital and Medical Facilities Construction Program)

A. DESIGNATION OF STATE AGENCY responsible for administering the State Plan:

1. AGENCY NAME

Montana State Department of Health
and Environmental Sciences

ADMINISTRATIVE UNIT

Bureau of Construction
Division of Hospital and
Medical Facilities

2. Has the organization of the State Agency
been changed during the past year? ☒ YES ☐ NO

(If "yes," attach chart showing organization of State Agency and
relationship of the unit responsible for administering the State
Plan to other units of State Agency.)

B. AUTHORITY OF THE STATE AGENCY:

Has any change been made in the authority of the State agency to carry out the
provisions of the State Plan? ☐ YES ☒ NO

(If "yes," attach copy of legislation or directive which accomplished change.)

C. DESIGNATION OF STATE ADVISORY COUNCIL:

Has any change been made in the membership of the State Advisory Council or
the manner in which consultation services for rehabilitation is to be provided
to the State Agency? ☒ YES ☐ NO

(If "yes," attach revised list of members)

D. METHODS OF ADMINISTRATION:

Do the methods of administration included in the approved State Plan reflect
accurately the current or projected method of administering the State Plan? ☒ YES ☐ NO

(If "no," attach revised or additional pages)

E. STATE AGENCY REQUIREMENTS:

Have any changes been made in (1) State goals or policies, (2) methods of
determining priority, (3) service area delineations, (4) bed need formula, or
(5) standards for maintenance and operation of facilities? ☒ YES ☐ NO

(If "yes," attach revised or additional pages)

F. FEDERAL SHARE (Indicate below for each category.) Refer to Page 20

CATEGORY	MAXIMUM	ACTUAL
HOSPITALS AND PUBLIC HEALTH CENTERS	40 %	
FACILITIES FOR LONG-TERM CARE	40 %	
OUTPATIENT FACILITIES	40 %	
REHABILITATION FACILITIES	55 %	
MODERNIZATION	40 %	

Up to 90%
as explained
on page 20

G. DATE OF PUBLIC NOTICE: October 12, 13, 14, 15, 16, 1971

I hereby certify that the information above and attached statements, charts, maps, and tables, if any, are true and correct to the
best of my knowledge and belief, and are an accurate presentation of the State Plan adopted by the State Agency.

PUBLIC NOTICE

The 1972 Revision of Montana State Plan for Hospital and Medical Facilities Construction has been prepared.

The Hospital and Long-Term Care Facilities Advisory Council will review the Plan, in Helena, Montana on October 28, 1971 and submit their recommendations to the State Board of Health.

After approval by the Board of Health the State Plan is submitted to the U.S. Public Health Service for approval which is required before 1972 Fiscal Year funds for this program may be committed to specific projects.

This Revision of the Plan includes:

1. Operational data from all facilities in the State for Calendar Year 1970
2. Current construction, both under and outside the Hill-Burton Program.
3. Changes in projected needs for both beds and facilities.

4. Revised priorities for construction or modernization resulting from the above.

The "A" Priority group for General Hospital Service Areas is as follows:

- (1) R-4, Ravalli County, Hamilton
- (2) R-17, Park County, Livingston
- (3) L-3, Havre Intermediate, Havre
- (4) R-14, Ferngus, Petroleum & Judith Basin Counties, Lewistown
- (5) R-7, Glacier County, Cut Bank
- (6) R-4, Toole County, Shelby
- (7) R-5, Mineral County, Superior
- (8) R-11, Teton County, Choteau
- (9) R-29, Garfield County, Jordan
- (10) R-29, Powder River County, Broadus

Due to the number of known applicants for assistance, which requests will exceed the amount of Federal Funds expected to become available, projects in categories other than the "A" Priority group can not be considered at this meeting.

The Council will hold a Public Meeting in the Cogswell Building, State Capitol, Helena, on Friday, October 29, 1971, at which time individuals or organizations desiring to construct a hospital or related facility, may appear before the Council and offer information and/or evidence in support of their project.

This is the 24th annual revision of the original State Hill-Burton Plan and is compiled in strict accordance with Federal Regulations and Guide Lines.

Any individual desiring to examine this document prior to consideration by the Advisory Council should visit the Division of Hospital and Medical Facilities Construction, Montana State Department of Health, 510 Logan Street, Helena, Montana.

October 14, 21, 28, 1971

PUBLIC NOTICE

The 1972 Revision of Montana State Plan for Hospital and Medical Facilities Construction has been prepared.

The Hospital and Long-Term Care Facilities Advisory Council will review the Plan, in Helena, Montana on October 28, 1971 and submit their recommendations to the State Board of Health.

After approval by the Board of Health the State Plan is submitted to the U.S. Public Health Service for approval which is required before 1972 Fiscal Year funds for this program may be committed to specific projects.

This Revision of the Plan includes:

1. Operational data from all facilities in the State for Calendar Year 1970
1. Current construction, both under and outside the Hill-Burton Program.
3. Changes in projected needs for both beds and facilities.

4. Revised priorities for construction or modernization resulting from the above.

Continuation Sheet

ANNUAL REVISION OF STATE PLAN

(HSM-126-1)

- H. (X) This Plan has been submitted to the Governor for his review and his comments, or a statement that no comments have been made is attached. The State agency assures that any amendment to this Plan, as well as projections or other periodic reports required under the program, will also be submitted for the Governor's review. Comments, if any, will accompany the amendments or other required program materials when they are submitted to the Regional Office, Health Facilities Planning and Construction Service, USPHS, Department of Health, Education and Welfare.

AUTHORITY OF STATE AGENCY

The enactment by the Montana Legislature of Chapters 269 and 270 of the 1947 Session Laws enabled the State of Montana to comply with all the requirements of the original Hospital Survey and Construction Act. Chapter 270, the Montana Hospital Survey and Construction Act, established the Board of Health as the sole agency for the administration of the Plan, authorized the inventory and survey of existing hospital facilities, and provided for an Advisory Council.

It was necessary to amend the original State Enabling Law to cover the expanded program as provided by the Medical Facilities Survey and Construction Act of 1954. This was accomplished by Senate Bill No. 67, signed by the Governor, March 4, 1955, included as Chapter 215 of the 1955 Montana Session Laws.

The Governor designated the State Board of Health as the sole agency to implement the provisions of Public Law 88-164, cited as the "Mental Retardation Facilities and Community Mental Health Centers Construction Act of 1963." The enabling legislation was provided by Chapter 77 of the 1965 Montana Session Laws. This also provided for the "Hospital and Medical Facilities Amendments of 1964," Public Law 88-443.

Chapter 269 of the 1947 Montana Session Laws provided for the licensing, inspection, and regulating of hospitals throughout the State. The Federal Act required that minimum standards for maintenance and operation be established for hospitals which receive Federal aid under the Act. The State Licensing Law, as passed to comply with the Federal Act, is intended to apply to all hospitals (except Federal) since minimum standards are equally desirable for all operating hospitals.

Chapter 78 of the 1965 Montana Session Laws amended the Licensing Law to include facilities for mental diseases and mental retardation. It also provided a hospital, medical and related facilities advisory council to consult and advise the board in matters of policy affecting administration of the Montana Hospital, Medical and Related Facility Survey and Construction Act and in the development of rules, regulations and standards provided under the Licensing Act.

The 1967 Montana Legislative Assembly enacted Chapter 197 which pertains to the State Agency in administering the Hospital, Public Health Center, and Medical Facility Survey and Construction Act.

Section 1, Chapter 197, Laws of Montana, 1967, (Chapter 41--State Board of Health, Section 69-4101, Revised Codes of Montana, Volume 4, Part 1, 1967 Cumulative Pocket Supplement) established a State Department of Health within the executive branch of State government. Effective July 1, 1967, the department of the State Board of Health is designated as the State Department of Health.

69-5201. DEFINITIONS (Chapter 52, R.C.M., Vol. 1, Part 4, 1971 Cumulative Pocket Supplement)

(3) "Long Term Care Facility" means a place operated for profit or not, which provides to a total of four (4) or more persons, any of the following: nursing care, personal care, and maintenance; provided that this decision applies only to such persons as are unable to properly care for themselves. "Long Term Care Facility" also means a place operated for profit or not, which provides sheltered care to four (4) or more aged persons not related to the operator by blood or marriage. It includes:

- (a) xxxx
- (b) xxxx
- (c) "intermediate care facilities" which are facilities furnishing limited nursing services and providing personal care and services to residents not in need of continuous skilled nursing care;
- (d) "personal care homes" which are facilities providing personal care and services to residents not in need of skilled nursing care;
- (e) "boarding homes" which are facilities providing only maintenance and sheltered care;
- (f) facilities providing combinations of services provided by extended care facilities, nursing homes, intermediate care facilities, personal care homes, and boarding homes.

The State Statutes are not reproduced in their entirety in this Plan; however, copies will be furnished to interested parties on written request to the Montana State Department of Health and Environmental Sciences.

Inquiries or requests for additional information may be addressed to the Montana State Department of Health and Environmental Sciences, Attention: Administrator, Division of Hospital and Medical Facilities, Helena, Montana 59601. Persons wishing to confer are invited to call at the Division Office, 1424 9th Avenue, Helena. Telephone: Area Code 406, 449-2037.

EVIDENCE OF AUTHORITY

The Department of Health and Environmental Sciences was created by Section 82A-601, Chapter 6, Senate Bill No. 274, enacted in 1971 and commonly known as "The Montana Executive Reorganization Act." The Department of Health and Environmental Sciences was activated by the Governor under Executive Order dated November 27, 1971. Pertinent sections of the Act are:

CHAPTER 6. DEPARTMENT OF HEALTH AND ENVIRONMENTAL SCIENCES

82A-601. DEPARTMENT OF HEALTH AND ENVIRONMENTAL SCIENCES--
CREATION: HEAD

There is created a department of health and environmental sciences. The department head is the director of health and environmental sciences provided for in section 82A-608 of this chapter.

Section 2, Chapter 197, Laws of Montana, 1967, states "State Board" to mean the State Board of Health and "Department" to mean the State Department of Health.

Membership of the State Board of Health is detailed by law, Section 3, Chapter 197, Laws of Montana (Section 69-4103, Revised Codes of Montana, Volume 4, Part 1, 1969 Cumulative Pocket Supplement):

- "(1) The State Board consists of seven (7) members appointed by the governor for terms of seven (7) years with the consent of the Senate. An appointment to replace a member whose term has expired shall be for seven (7) years. An appointment to replace a member whose term has not expired shall be for the remainder of the term.
- (2) Membership of the State Board shall include:
 - (a) three (3) persons who have a degree of doctor of medicine;
 - (b) one (1) person who has a degree of doctor of dental surgery;
 - (c) three (3) persons who have demonstrated intelligent and active interest in the field of public health who do not hold the degree of doctor of medicine or doctor of dental surgery.
- (3) Terms of members holding office when this act becomes effective shall not be affected."

Chapter 197, Laws of Montana, 1967 (Chapter 52, Sections 69-5201 to 69-5221, Revised Codes of Montana, Volume 4, Part 1, 1969, Cumulative Pocket Supplement) supercedes Chapter 78 and Chapter 162 of the 1965 Montana Session Laws. This law provides for the licensing of hospitals, hospital related facilities, and long-term care facilities. It also provides, in Section 172 (69-5214) a hospital and long-term care facility advisory council to consult with the State Board in administering this chapter and statutes relating to hospitals, medical, and related facilities survey and construction contained in Sections 180 through 192 (69-5301 through 69-5313) of this Act.

This council combines the functions of the Advisory Council formerly provided in Chapter 78 (Section 69-2910) and Chapter 162 (Section 15) of the 1965 Montana Session Laws and resulted in the appointment of four (4) additional members to the previous Council. Two each of the new members represent long-term care facilities and consumers respectively.

Chapter 197, Laws of Montana, 1967, also includes hospitals, medical and related facility survey and construction in Sections 180 through 192. This is designated as Chapter 53, Sections 69-5301 through 69-5313 of the Revised Codes of Montana, Volume 4, Part 1, 1969 Cumulative Pocket Supplement. Sections 181 (69-5302) designates the State Department of Health as the principal State Agency for establishing and administering a statewide plan for construction, modernization, alteration, equipment, maintenance, or operation of any hospital, medical or related facility for provision of care, treatment, diagnosis, rehabilitation, training or related service.

69-5302. STATE DEPARTMENT OF HEALTH AS PRINCIPAL STATE AGENCY FOR HOSPITAL CONSTRUCTION - CONTRACTS WITH FEDERAL GOVERNMENT.

The State Department of Health is the principal state agency for establishing and administering a statewide plan for construction, modernization, alteration, equipment, maintenance, or operation of any hospital, medical, or related facility for provision of care, treatment, diagnosis, rehabilitation, training, or related service. With approval of the State Board of Health, the Executive Officer of the State Department of Health may enter into contracts and agreements with agencies of the Federal Government to secure the benefit of Federal programs to provide adequate medical and related facilities and services.

History: En. Sec. 181, Ch. 197, L. 1967.

69-5303. POWERS AND DUTIES OF STATE DEPARTMENT OF HEALTH

The department shall:

- (1) inventory existing hospitals, medical and related facilities;
- (2) survey the need for construction or alteration of hospitals;
- (3) develop and administer a state plan for the construction and alteration of public and other nonprofit hospitals, medical and related facilities;
- (4) if desirable, enter into agreements after approval by the State Board for the utilization of facilities and services of other departments, agencies, and institutions, public or private;
- (5) accept and deposit with the state treasurer and spend any grant, gift, or contribution made to meet costs of carrying out the purposes of this act.

History: En. Sec. 182, Ch. 197, L. 1967.

69-5214. HOSPITAL AND LONG-TERM CARE FACILITY ADVISORY COUNCIL - MEMBERS APPOINTED BY GOVERNOR - FUNCTIONS.

Council abolished, Section 82A-609(9). (Chapter 6, Senate Bill No. 274, 1971 Montana Session Laws.)

82A-602. AGENCIES ABOLISHED: FUNCTIONS TRANSFERRED TO DEPARTMENT.

(1) The state department of health, created in title 69, chapter 41, R.C.M., 1947, and its units are abolished, and their functions, except those enumerated below, are transferred to the department of health and environmental sciences;

82A-603. ADDITIONAL FUNCTIONS TRANSFERRED TO DEPARTMENT.

(2) The functions of the state board of health, which are provided for in title 69, chapter 41, R.C.M. 1947, except the functions enumerated below, are transferred to the department.

82A-605. STATE BOARD OF HEALTH--CONTINUED; RENAMED; DESIGNATION

(1) The state board of health provided for in title 69, chapter 41, R.C.M. 1947, is continued and renamed the board of health and environmental sciences.

(2) The board is designated as a quasi-judicial board for purposes of section 82A-112 of this act.

82A-609. ADDITIONAL AGENCIES ABOLISHED.

(9) The hospital and long term care facilities advisory council, provided for in section 69-5214, R.C.M. 1947.

R.C.M. 1947 82A-110 - CREATION OF ADVISORY COUNCIL

Subsection 5 - Service Per Diem and Expenses

(5) Each member of an advisory council may, unless he is a full-time salaried officer or employee of this state, be paid in an amount to be determined by the department head, not to exceed twenty-five dollars (\$25) for each day in which he is actually and necessarily engaged in the performance of council duties, and shall also be reimbursed for actual and necessary expenses incurred while in the performance of council duties. Members who are full-time salaried officers or employees of this state may not be compensated for their service as members, but shall be reimbursed for their expenses.

Effective for State Department of Health and Environmental Sciences
November 29, 1971.

(A) Representatives of non-governmental organizations or groups concerned with operation, construction, or utilization of hospitals or other facilities and Community Mental Health Centers or other Mental Health facilities.

(B) Representatives of State agencies concerned with operation, construction or utilization of hospitals or other facilities and Community Mental Health.

(C) Representatives for education or training of Health Professions personnel.

(D) Equal number of consumers familiar with need for services.

METHODS OF ADMINISTRATION

Preparation and Publication of the State Plan

1. The cut-off date for statistics for the basis of the State Plan preparation and modification shall be December 31 of each calendar year.
2. The State Plan shall be developed in consultation with other State Agencies, non-governmental organizations or groups, and public agencies, concerned with the operation, construction or utilization of hospitals and medical facilities.
3. The State Plan will be written, reviewed by the Facilities Committee of the State Comprehensive Health Planning Advisory Council and approved by the State Board of Health and Environmental Sciences. A general description of the provisions included in the Plan will be published and a reasonable notice of a public hearing will be given at which interested persons or organizations will be given an opportunity to be heard. The public hearing will be scheduled in conjunction with the Comprehensive Health Planning Advisory Council meeting. The State Plan will be available for public examination for a period of at least thirty (30) days.
4. The State Plan will be submitted to the Montana State Department of Planning and Economic Development, which agency has been designated by the Governor to review such plans for conformance to the overall objectives of the State of Montana.
5. The State Plan will be submitted to the Regional Areawide Comprehensive Health Planning Councils (314b agencies) for their recommendations and comments. Where no such agency exists, the Plan will be submitted to the Montana State Comprehensive Health Planning Council (314a agency) for review and recommendations.
6. The Montana State Department of Health and Environmental Sciences shall take steps to insure publication of a general description of the State Plan in newspapers of general circulation throughout the State.
7. The State Plan, or an amendment thereto, shall be submitted to the Surgeon General for review and approval prior to July 1 of each calendar year.
8. After approval of the State Plan by the Surgeon General, it shall be made available to those who desire a copy.

Establishment of the Project Construction Schedule

Subsequent to approval of the State Plan by the Surgeon General of the U.S. Public Health Service, the State Department of Health and Environmental Sciences will develop a project construction schedule for the fiscal year covered by the Plan. Projects will be included in the project construction schedule giving consideration to the following factors:

1. The priority of the project as determined in accordance with the principles outlined in the State Plan for determination of need.
2. The intent of sponsoring agencies to begin construction within a reasonable length of time.
3. The ability of the sponsoring agency to meet the financial requirements for construction, maintenance, and operation of the proposed facility. Assurance must be given that sufficient funds are available for initial supplies, payrolls, etc., required to place the facility in operation. In accordance with the Public Health Service Regulations, the sponsoring agency for a new project must present an operating budget to assure financial ability for the two-year period immediately following its completion. Assurance must be given by the sponsoring agency that the operating organization or method of operation has been determined and that equipment lists for fixed equipment and major movable equipment will be submitted to the Montana State Department of Health and Environmental Sciences shortly after plans and specifications have been submitted or no later than when the project is 50% completed.
4. The maintenance of an appropriate balance in the construction of various categories of facilities. The balance between categories in facilities need not be reflected in each Project Construction Schedule; however, construction which is scheduled under the program will reflect an appropriate balance between the various categories of facilities.
5. In case of reclassification of a facility or facilities in a service area or a community within a service area from "conforming" to "non-conforming", the facility so classified will be given a reasonable time, as determined by the State Board of Health and Environmental Sciences, to signify its intention to bring the facility into conformance either through new construction, renovation or remodeling. In the interim period no application for financial assistance from other sponsors in the service area or community will be considered for the replacement of the facility in question.
6. For long-term care facilities, when the situation on the basis of administrative staff review indicates that a facility does not meet the intended criteria of the State Plan, no application shall be approved until it has been decided by the Board of Health and Environmental Sciences on its own merits. This also applies to certifications for FHA.

7. The sponsoring agency for a long-term care facility and/or outpatient facility must show that it has a transfer agreement with an existing general hospital.

8. A sponsor or facility requesting Federal financial assistance for "equipment only" projects must clearly demonstrate that the equipment so obtained will provide a service not previously available in that community or within a reasonable distance thereof. A "community" for purposes of this paragraph is defined as an established hospital and long-term care service area. Upon appropriate documentation and in peculiar instances, this definition may be interpreted to mean "or a separate portion thereof."

If a project is removed from the Project Construction Schedule by the State Department of Health and Environmental Sciences, the Schedule will be revised to include the next highest priority project which meets the requirements for inclusion. After the approval of the schedule, a project will not be removed therefrom except when an application must be dropped for any of the following reasons:

1. Failure to submit required documents.
2. Failure to comply with the present rules and regulations, such as inability to meet the financial requirements or failure to prepare plans and specifications.
3. Voluntary withdrawal.
4. When final hospital construction costs are determined through opening of bids, and are found to exceed the estimated costs and the sponsor lacks adequate funds to meet his share of the costs, the project shall remain on the schedule for the balance of the fiscal year, but for not less than an additional 120 days in order for the sponsor to obtain additional funds.
5. Projects removed from the schedule may be reinstated upon demonstration by the sponsor that adequate funds are available in accordance with provisions of the State Plan.

The total amount of Federal funds allocated to projects listed on the construction schedule from any one fiscal year will be limited by the Federal allotment to the State for that particular fiscal year.

Applications for Federal assistance under Title VI, PHS Act, as amended, must be completed by each sponsor on the prescribed Public Health Service forms.

Construction Standards

The Montana State Department of Health and Environmental Sciences has issued minimum general standards for construction and equipment for

new hospitals and medical facilities. These meet all minimum standards as set forth in the General Standards of Construction and Equipment, PHS Regulations.

Copies of these standards will be made available to architects and sponsors involved in construction.

Minimum Standards of Maintenance and Operation

Minimum standards for the maintenance and operation of hospitals and related facilities providing inpatient care are promulgated by the Montana State Department of Health and Environmental Sciences. These apply to all hospitals and long-term care facilities regardless of whether or not these received financial aid under the Federal Act. Standards promulgated by the State Department of Health and Environmental Sciences are:

Montana Licensing Law and Standards for Hospitals and Related Institutions, revised January 1, 1972. These are promulgated under authority of Chapter 269, 1947 Montana Session Laws, as amended (Section 69-2901 through 69-2918, Revised Codes of Montana, 1947 Annotated).

Montana Licensing Law and Standards for Long-Term Care Facilities, Revised May 1971. These standards are developed under the provisions of Chapter 197, 1967 Montana Session Laws, (Section 69-5201 through 69-5221, Revised Codes of Montana, Volume 4, Part 1, 1971 Cumulative Pocket Supplement).

The Licensing Program is the responsibility of the Division of Hospital and Medical Facilities which is responsible for the licensing, inspection, and enforcement of the above standards. Copies of the official State standards and regulations for licensure of hospitals and nursing homes are distributed to all facilities in Montana and are available on request to the State Department of Health and Environmental Sciences.

Inspection of Projects

1. When a request for payment of an installment is made, the State Department of Health and Environmental Sciences will make an inspection of the project to determine that services have been rendered, work has been performed, and purchases have been made as claimed by the applicant and in accordance with the approved project application.
2. The State Department of Health and Environmental Sciences will make such additional inspections as are deemed necessary.
3. Reports of each inspection will be retained in the files of the State Department of Health and Environmental Sciences.
4. Files will be maintained on all correspondence incident to inspections of a project.

Construction Payments

Requests for construction payments shall be submitted by applicants to the State Department of Health and Environmental Sciences at the times prescribed by the Public Health Service Regulations, as amended. Under existing law, the State is authorized to make payments of Federal funds to all types of eligible applicants. Federal funds shall be paid to the State Treasurer. The State will promptly remit, or credit, any payments of Federal funds received by the State for payment to applicants for approved construction projects.

Methods of Personnel Administration

Methods of personnel administration have been established and will be maintained in the State and official local agencies administering the State Plan in conformity with the Standards for a Merit System of Personnel Administration, 45 CFR, Part 70. Laws, rules, regulations, and policy statements effectuating such methods of personnel administration are a part of the Plan. Statements of acceptance of these Standards by all official local agencies included in the State Plan have been obtained and methods have been established by the State to assure compliance by local jurisdictions. These statements and citations of applicable State laws, rules, regulations, and policies which provide assurance of conformity to Federal Merit System Standards will be submitted for determination of adequacy. Copies of the materials cited and of similar local materials maintained by a State official responsible for compliance by local jurisdictions will be furnished to the Regional Office on request.

Fiscal and Accounting Procedures

1. The State Department of Health and Environmental Sciences will comply with the provisions of the Public Health Service Regulations by maintaining the necessary accounting records and controls, and requiring applicants for Federal funds to maintain adequate fiscal records and controls.

2. The State Department of Health and Environmental Sciences agrees that it will retain on file all documents coming into its possession which relate to any expenditure under the Act, as amended. In addition, the State Department of Health and Environmental Sciences will take such steps as are necessary to assure that the applicants will retain all relevant and supporting documents and will establish suitable property inventory records covering all equipment of more than nominal value. The State Department of Health and Environmental Sciences further agrees that it will retain the accounting records, controls and documents, as described above, for a period of at least one year following its participation in the program, and will take necessary steps to assure that applicants retain such documents for a period of at least five years after the final payment of Federal funds.

3. The applicant sponsor of a new facility will submit to the Department of Health and Environmental Sciences, Annual Fiscal Reports for the succeeding five (5) years following the acceptance and licensing of the facility. The reports will be submitted immediately following the close of the fiscal year and, as a minimum, will include:

- (a) complete financial audit of the operations of the facility for the reporting period;
- (b) budget for the succeeding year;
- (c) projected profit/loss statement for the succeeding year.

Access to State Agency Records by the Comptroller General

The Surgeon General of the Public Health Service and the Comptroller General of the United States, or their duly authorized representatives, shall have access for purposes of audit and examination to all program records maintained by the State Agency in accordance with established program requirements of the Surgeon General.

Federal Share of the Cost of Each Construction Project

1. The State Board of Health and Environmental Sciences has determined that the maximum Federal participation in eligible costs for all approved projects, except as noted below, is up to 40% in all categories except rehabilitation which may be up to 55%. The actual participation will be determined by the State Board of Health and Environmental Sciences, with the advice of the Facilities Committee, giving careful attention to:

- (a) the applicants' financial resources that are or can be made available for project costs.
- (b) the Federal funds available to the State Agency
- (c) the extent to which, in the judgment of the State Agency, the applicant is making practical use of existing facilities and equipment, the design of the facilities is economical, and the space and equipment being provided is reasonable.

2. Nothing in the foregoing shall preclude funds being allocated or granted to an applicant from more than one fiscal year's allocations, or the grant being increased or decreased at the request of, or with the consent of the applicant during the project's implementation if the scope of the project is materially changed. Neither shall it preclude the State Agency providing incentive grants in addition to the above-stated maximum which, when combined, will not exceed 90% of the eligible costs for:

- (a) projects that will provide services primarily for persons in an area determined by the Secretary of Health, Education, and Welfare and/or the State Agency to be a rural or urban poverty area, and

- (b) projects that offer a potential for reducing health care costs through shared services among health facilities, inter-facility cooperation, or through the provisions of free-standing outpatient facilities.

3. In order to allow for the orderly programming of funds available to the State and to provide assistance to the greatest number of areas having high priority, the amount of Federal assistance granted to any project shall be limited as follows:

- (a) Federal assistance will not be granted for projects which plan to construct beds in excess of those programmed in the current State Plan;
- (b) Federal assistance will not be granted for a portion of the project when there are indications that the total cost of constructing the facility exceeds the "necessary" costs of construction. For example: it may be determined by the State Agency with the approval of the Public Health Service that certain construction and/or equipment items are more in the nature of a luxury rather than an essential in the provision of a hospital or related medical facility which will meet the objectives of the Hill-Burton Act. As a result, all or a portion of the cost of such construction and/or equipment items may be excluded from Federal participation.

Transfer of Allotments to Another State

The provisions of Title VI, PHS Act, as amended, and the Public Health Service Regulations pertaining to transfer of allotments are made a part of this Plan.

Transfer of Allotments for Modernization to Another Category Within the State.

The provisions of Title VI, PHS Act, as amended, and the Public Health Service Regulations pertaining to transfer of allotments are made a part of this Plan.

Fair Hearings

Upon petition, the State Department of Health and Environmental Sciences will provide an opportunity for a fair hearing before the State Board of Health and Environmental Sciences to every applicant who has requested Federal aid for construction of any of the medical facilities included in the Act, and who is dissatisfied with any action of the State Department of Health and Environmental Sciences regarding the application.

Actions of the State Department of Health and Environmental Sciences which entitle applicants to a hearing include the following:

1. Denial of opportunity to make formal application.
2. Refusal to consider an application.

3. Rejection or disapproval of an application.

Appeals from decisions or actions of the State Board of Health and Environmental Sciences must be made by the appellant, in writing, within thirty (30) days of the date of the adverse decision by the State Board of Health and Environmental Sciences.

The appellant will be notified, in writing, of the time and place of the hearing which will be determined by the State Board of Health and Environmental Sciences and be reasonably convenient for the appellant.

The appellant is entitled to be represented by friends or counsel as he so desires. The appellant and other persons interested and concerned with the State Board of Health and Environmental Sciences' decision are entitled to present pertinent evidence in the way desired, subject to reasonable procedures of admissibility, and methods of presentation.

The decision of the State Board of Health and Environmental Sciences will be made in writing, within thirty (30) days from the date of the hearing and will be based on the evidence presented at the hearing.

A record of the hearing will be made, and upon request of the appellant, will be made available for examination.

Conflict in Interest

No full-time officer or employee of the State Department of Health and Environmental Sciences, or any firm, organization, corporation, or partnership which such officer or employee owns, controls, or directs, shall receive funds from the applicant, directly or indirectly, in payment for services provided in connection with the planning, design, construction or equipping of any project under this Plan.

Civil Rights

Assurance is hereby given that in accordance with Title VI of the Civil Rights Act of 1964 (42 U.S.C. 2000d et. seq.) and the Regulation issued thereunder by the Department of Health, Education, and Welfare (45 CFR Part 80) no individual shall, on the grounds of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be otherwise subjected to discrimination under this Plan.

The State Agency has established and will maintain methods of administration to assure that each program or activity for which it receives Federal financial assistance will be operated in accordance with the preceding paragraph of this statement. A copy of such methods of administration and any amendments thereto will be submitted to the Regional Office of the Department of Health, Education, and Welfare for determination as to adequacy. The State Agency will amend its methods of administration from time to time as necessary to carry out the purposes for which this statement is given.

The State Agency recognizes and agrees that Federal financial assistance will be extended in consideration of, and in reliance in, the representations and agreements made in this statement, and the United States shall have the right to seek administrative and judicial enforcement thereof.

Nondiscrimination in Construction Contracts

Each construction contract is subject to the conditions that the grantee shall comply with the requirements of, and give the assurances required in Executive Order 11114, June 22, 1963, (28F.R. 6485), and the applicable rules, regulations, and procedures prescribed pursuant thereto by the President's Committee on Equal Employment Opportunity (28 F.R. 9812).

Assurances to Those Unable to Pay

Before an application for construction of a facility under this Plan is approved, the State Department of Health and Environmental Sciences shall obtain assurance from the applicant that the facility will furnish below cost, or without charge, a reasonable volume of services to persons unable to pay therefor.

Change of Status of Facility

In accordance with Public Health Service Regulations, the State Agency shall promptly notify the Surgeon General, in writing, if at any time within 20 years after the completion of construction, any hospital, outpatient facility, rehabilitation facility, or long-term care facility which received funds under the Federal Act is transferred to any person, agency, or organization not qualified to file an application under the Act or not approved as a transferee by the State Agency; or, ceases to be a nonprofit hospital, nonprofit outpatient facility, nonprofit rehabilitation facility, or nonprofit long-term care facility as defined in the Federal Act.

CHAPTER II

GOALS AND GENERAL POLICY

GOALS AND GENERAL POLICY

The State Plan is a public document for guiding and influencing the development of patient care service through the construction and modernization of hospitals and related medical facilities serving each area of the State, including interstate areas. It describes the present system of hospitals and related health facilities serving each area of the State, and presents a coordinated, comprehensive program for the orderly development of needed health services and facilities designed to assure high quality patient care. It serves as the basis for the allocation of funds from all sources for modernization and construction purposes as well as public grants-in-aid funds for these purposes.

The State Plan is in accordance with the basic definitions, standards, and methods outlined in the Public Health Service Act and Regulations, and adapted for planning purposes to meet the estimated needs of Montana. The Plan designates locations of medical installations, based upon a study and analysis of available information that will affect present and future trends in hospital and medical facilities requirements. From existing hospitals and the use people make of them, a determination is made regarding the need for new and/or additional facilities.

One of the most important cornerstones of good planning is a proper delineation of hospital service areas. If areas are not accurate geographic definitions of patient origin for the hospital and medical facilities in the areas, even the application of utilization formulas will not provide an accurate picture of the needs of these areas.

In the light of past experience, the hospital service areas for the State of Montana have been drawn and grouped around the trade and transportation patterns, natural geographic boundaries, and highways and railroads, to reflect more accurately the flow of patients from outlying areas to the hospitals and medical facilities in the rural and urban areas and to provide areas large enough to support these facilities with adequate basic services.

While a number of small hospitals are needed to care for the more isolated areas of the State, it must be recognized that the smaller hospitals cannot provide complete care to a number of its patients due to its necessarily limited services. It is therefore recommended that where bed need exists, that new bed construction go to an existing facility and that the larger hospitals extend their services so that they may offer complete general hospital care. This complete general hospital care, recommended for hospitals over 75 beds, should include not only normal services, but some of the aspects of rehabilitation, acute psychiatric, long-term care facilities, organized outpatient care and, perhaps, even facilities for Public Health workers.

It is recommended that the smaller hospitals in a service area be affiliated with the area or regional hospital as closely as possible so that patient care can be carried out at the highest standards and as efficiently as possible. Further, long-term care and outpatient facilities must have an established procedure for the transfer of a patient to a hospital without undue delay when such transfer is deemed necessary by the attending physician.

The State Agency will continue to pursue a policy of close cooperation with all agencies, planning groups, and other interested parties in developing the State Plan.

Governor Tim Babcock, in May 1964, designated the Montana State Department of Health as the Mental Retardation Planning Agency for Montana. Mary E. Soules, M.D., M.P.H., Director of the Division of Disease Control, State Department of Health, was named director of this mental retardation planning program by John S. Anderson, M.D., M.P.H., Executive Officer of the State Department of Health, and Mrs. Maxine S. Homer, Health Education Consultant, was named the coordinator. Doctor Anderson also named Robert J. Munzenrider, Director of the Hospital Facilities, to be in charge of the construction phase of the program.

In accordance with the Development Disabilities Act (P.L. 91-517), 1970, the Superintendent of Boulder River School and Hospital was appointed the State Mental Retardation Authority. The construction phase of the program remains the responsibility of the Division of Hospital and Medical Facilities, Montana State Department of Health and Environmental Sciences.

The Governor, in 1963, directed the state mental health authority to develop a Comprehensive Mental Health Plan for Montana, and the State Department of Health to administer the construction phase of the Federal Community Mental Health Centers Act.

The director and various division administrators of the State Department of Health and Environmental Sciences have participated to a major degree in the formulations of the committees for mental health and mental retardation. Since the State Department of Health and Environmental Sciences has been administering the Hill-Burton Program in Montana since 1947, the three construction programs are closely related.

Because Montana has neither a medical school nor a teaching hospital, it is not possible to participate in the Health Professions Educational Assistance Act established under the authority of Public Law 88-129 as amended. This act provides for Federal assistance in the cost of construction of schools of medicine, osteopathy, pharmacy, dentistry, optometry, podiatry, and public health and teaching hospitals affiliated with medical and osteopathic schools.

Public Law 88-581, as amended, the Nurse Training Act, provides Federal construction grants to assist with the cost of construction of schools of nursing. The State Department of Health and Environmental Sciences will assist interested groups in every way possible in seeking aid in providing these facilities.

The Hospital and Medical Facilities Amendments of 1964, Title VI, PHS Act as amended, provide greater uniformity on a nationwide basis in the methods for surveying and evaluating existing facilities and beds. This is more fully described under the heading of "Plant Rating Techniques." While recognizing the need for greater standardization in the survey criteria, the Public Health Service has left open the way to modify rigid standardization on the basis of experienced judgment.

Experience has demonstrated that an available hospital bed will be a used bed. Experience has also demonstrated that almost regardless of the imbalances and inefficiencies built into a hospital, it will function, not efficiently nor economically, but the personnel will manage to function in it. Also, the Board of a hospital, its administrator, and the community they serve, have as their objective a complete hospital able to meet any problem presented by the patient who comes to them. Another objective of almost every hospital is to qualify for the numerous accreditations and approvals awarded to hospitals which meet the standards established for their recognition. These objectives are commendable. An empty hospital bed is an expensive bed because of wasted facilities and personnel. Further, a hospital bed undeservedly occupied is even more wasteful.

Statistical information required for preparation of a State Plan when applied to the determination of need for facilities, will leave considerable area for judgment. The Public Health Service developed a rather simple formula for determining hospital bed needs, at the same time allowing for modification dictated by judgment. The formula is based on three factors; they are population served, patient days rendered, and projected population.

The economics and size of a hospital and cost of construction must also be considered. The small hospitals in the more isolated areas present problems in design, particularly in the services that are to be offered which of necessity must be limited. In the larger communities having two or more hospitals in need of modernization or replacement, consideration should be given to the construction of a single hospital which would provide more complete services to the patient.

Another matter of concern pertains to the duplication of expensive equipment for limited use such as cobalt vaults, deep-ray therapy, highly specialized psychiatric items, etc. Similar expenditures should be carefully restricted among those institutions affording maximum use and greatest community benefits.

Specific policies for guidance in the allocation of Federal grants are as follows:

1. The Facilities Committee, at its regularly scheduled meeting, will review applications for project construction and recommend to the State Board of Health and Environmental Sciences projects that are to be included on the Project Construction Schedule utilizing available Federal funds. Applicants will be given at least three weeks notice of such meetings to afford them the opportunity to appear before the Committee in behalf of their applications. Applications will be considered by the Committee based on conformance with the State Plan, area priority, the availability of Federal funds, and specific policies for guidance in the allocation of Federal grants. No application for project construction which contemplates the use of Federal funds, either in the form of grants or loans, will be considered unless submitted prior to September 1 of each year.

2. (a) As a prerequisite for filing an application for project construction, the sponsor shall submit for review and approval a detailed program outlining the facilities and services to be provided by the proposed facility, arrangements with other hospitals in the service area, or community, in order to avoid the duplication of facilities, services, and expensive equipment. This program shall be submitted prior to engaging the services of an architect.

(b) As soon as an applicant decides to request Federal financial assistance (OMB Cir. A-95) for a proposed project under this program, the applicant:

- (1.) Must notify the State and either the regional or metropolitan clearinghouses of the intent to apply for Federal assistance. The notification must contain sufficient information to enable the clearinghouses to review the proposed activity and to determine those other agencies within the clearinghouse area which would have an interest in the proposed project. The information to be included in the notification and a suggested format for its presentation are shown on the attachment to these instructions. (Attachment 1)
- (2.) Must confer with the clearinghouse(s) or other appropriate agencies when so requested to discuss any issues which the proposed project may have raised to resolve such issues, if possible, while the application is under development and can incorporate agreed upon modifications.
- (3.) Must send the completed application to the clearinghouse(s) for comment if issues remain unresolved and the clearinghouse notifies the applicant of its intent to make comments.

- (4.) Must include with the application, when submitted to the Department, a statement that the procedures outlined above have been followed, and that (a) no comments have been received from the clearing-house(s), (b) that the comments of the clearing-house(s) have been considered in the development of the application, or (c) that the comments of the clearinghouse(s) on unresolved issues are transmitted with the application.

- (5.) (a) In Montana the State Clearinghouse is:

Director
State Department of Planning and
Economic Development
1716 - 9th Avenue
Helena, Montana 59601
(406) 449-2400

- (b) Metropolitan Clearinghouses Jurisdiction
Billings Yellowstone Co.

Billings-Yellowstone City-
County Planning Board
Yellowstone County Courthouse
Billings, Montana 59101

- Great Falls Cascade Co.

Great Falls City-County
Planning Board
Room B-4, Civic Center Building
Great Falls, Montana 59401

- (c) In order to expedite the processing of the application, the applicant (sponsor), as soon as he decides to request Federal financial assistance, will submit a copy of his request to the Regional Areawide Comprehensive Health Planning Council which will forward the application, with their comments and recommendations, to the State Agency. Where no such Regional Council exists, the application will be submitted to the Montana State Comprehensive Health Planning Council for their recommendations and comments.

3. Due to the number of applicants and the limited Federal funds available for construction, applicants will be limited to "reasonable costs" for the project. Consultant fees are allowable for financial feasibility studies and to the extent that they relate to the construction or equipping of the project. The cost of conducting feasibility studies to determine the need for construction or modernization of a facility is not allowable.

When participation in consultant fees for the preparation of equipment lists is requested, the "reasonable cost" of such will be determined by the State Agency, with the approval of the Regional Office. Such determination will be based on like costs incurred by other facilities in the State.

4. Applications for construction grants from general hospitals will be considered in the order of (1) modernization, to reclaim otherwise "non-conforming" beds by (a) renovation or (b) replacement; (2) preference to medical and surgical beds over obstetrical and pediatric services where the latter are operating at low occupancy.

5. No project to increase bed capacity will be approved for any institution having a substantially unmet need for modernization prior to submission and approval of plans to meet such modernization needs or where such beds will exceed those programmed in the State Plan.

6. Where an institution is functioning in a structure of inadequate capacity, obsolete arrangement and/or otherwise nonconforming rating, and could provide better service in a new plant, total replacement will be favored over a project of modernization of the existing structure, provided the latter will be abandoned as to its further use as a medical facility. A signed agreement to this effect will be submitted with the application.

7. No new general hospitals, other than replacements of obsolete facilities will be considered eligible unless an applicant can demonstrate that the area for which the proposed hospital is planned is not, nor can be, served by existing hospitals.

8. If two or more hospitals qualify equally under the standards, then factors concerning each, such as extent of community service offered, provision of ancillary facilities, nature and qualifications of staff, net additional beds, departmental rate of occupancy, etc. shall all be taken into consideration.

9. In the long-term care category, no application for construction of a sub-unit to a general hospital will be considered for less than 10 beds. Applications for long-term care facilities which are not sub-units of a general hospital must provide for 25 or more beds.

10. Chapter III of this State Plan establishes a priority sequence for the construction and modernization of hospitals. Applications received will be processed on the basis of conformance with the State Plan, area priority, and the availability of Federal funds.

Applications, in order to be considered, must be submitted on current forms of "Applications for Project Construction" supplied on request by the Montana State Department of Health and Environmental

Sciences. These must be complete with supporting material as outlined in the instructions for completing the application. The submission of an application under this State Plan, if not acted upon due to insufficient Federal funds, shall not be construed by the applicant as establishing a priority under subsequent revisions of the State Plan.

The "Inventory of Inpatient Facilities," in the Long-Term Care category of this Plan (Chapter IV) in contrast to previous plans has projected a bed need, by service area, for Skilled Nursing (including extended care beds), Personal Care (including intermediate care), and Boarding Home beds. As more data becomes available, especially as regards utilization, this projection will be continually revised and updated. It is expected that this new approach will provide all interested individuals and facilities a more valid projection of bed needs for all categories of long-term care. In order to realize this goal, it is imperative that all facilities truly report the type of patients or residents they serve and the scope of services provided those patients or residents.

CERTIFICATE OF NEED

Section 232 of the National Housing Act, as amended, authorizes a program of mortgage insurance for the construction and rehabilitation of nursing homes and intermediate care facilities. This program is administered by the Federal Housing Administration of the U.S. Department of Housing and Urban Development.

The law does not permit HUD to insure a mortgage under this program unless it has received a Certificate of Need, FHA Form 2576, from the State Agency designated in accordance with Section 604 (a) (1) of the Public Health Service Act for the state in which the nursing home or intermediate care facility is located. The Montana State Department of Health and Environmental Sciences is designated as the official State Agency.

The HUD office will issue a blank Certificate to the sponsor, together with a franked envelope so that the State Agency may return the completed Certificate directly to the HUD office.

The sponsor shall submit a blank Certificate to the Hospital and Medical Facilities Division of the Montana State Department of Health and Environmental Sciences, Helena, Montana 59601. The submission shall include information as to the sponsor to whom the Certificate is to be issued, the number of beds desired by category (nursing home and/or intermediate care) and the location of the proposed facility.

The Hospital and Medical Facilities Division will check the bed request of the sponsor with the bed need data for the area as reflected in the current Montana State Plan for Hospital and Medical Facilities Construction. No request will be considered for beds in excess of those shown in the State Plan.

The request for the Certificate of Need, together with bed information, will be referred to the Comprehensive Health Planning Division for review and comment by either that Division or the appropriate 314 (b) agency. A copy of the request will also be forwarded to the State Department of Social and Rehabilitative Services for review and comment. If the comments relative to the request are not received within thirty (30) days from the foregoing agencies, the Hospital and Medical Facilities Division will take the necessary action on the request for the Certificate.

The Certificate, if issued, will be referred to the State Board of Health and Environmental Sciences for their approval, and will then be forwarded directly to HUD (Federal Housing Administration).

The procedures outlined will also apply to sponsors requesting a Certificate of Need under Section 242 of the National Housing Act, as amended, for Mortgage Insurance for Hospitals. The Certificate of Need, when issued, will be forwarded to the Regional Office of Health, Education, and Welfare at Denver, Colorado, in accordance with an agreement between HUD and HEW.

Requests for Certificate of Need by other Federal agencies will be processed in the same manner.

PROJECT NOTIFICATION AND REVIEW FORM 14721

When applying for a Federal Grant, promptly notify the State Clearinghouse by completing this Project Notification and Review Form. Send to the Department of Planning and Economic Development, Capitol Station, Helena, Montana 59601.

4. The fourth part of the document discusses the consequences of failing to comply with the record-keeping requirements. It states that any individual or entity that fails to comply with these requirements may be subject to civil or criminal penalties.

CHAPTER III

PRIORITY AND SERVICE AREAS

PRIORITY DETERMINATIONS

Method of Determining Priorities

The number of beds for acute and long-term illness required to provide adequate service in each planning area has been determined in accordance with the Public Health Service Regulation.

In determining the priorities to be recommended for Federal financial assistance, the State Department of Health and Environmental Sciences has considered both those projects initially approved under the program and facilities under construction without Federal financial assistance as existing facilities.

1. Hospitals and Long-Term Care Facilities

The Federal Regulations define "hospital" as general, tuberculosis, mental, and other types of hospitals and related facilities; such as intensive, intermediate, and self-care nursing units, laboratories, outpatient departments, nurses' home facilities, and central service facilities operated in connection with hospitals; but not institutions furnishing primarily domiciliary care. The term "hospital" shall be restricted to institutions providing community service for inpatient medical or surgical care of the sick and injured and may include obstetrics.

A general hospital is defined as any hospital for short-term inpatient medical or surgical care of illness or injury and may include obstetrics.

A facility for long-term care (including extended care facility) is defined as one providing community service for inpatient care for convalescent or chronic disease patients who require skilled nursing care and related medical services:

- A. which is a hospital (other than a hospital primarily for the care and treatment of mentally ill or tuberculosis patients) or is operated in connection with a hospital, or
- B. in which such nursing care and medical services are prescribed by, or are performed under the general direction of, persons licensed to practice medicine or surgery in the State. Institutions furnishing primarily domiciliary care are not included.

"Chronic disease hospitals" and "nursing homes" are considered "facilities for long-term care."

The priority ranking as applied to individual service areas is based on the range of percentage of needs met for acute and long-term care facilities. This priority of projects has been developed in accordance with the Public Health Service Regulations.

These rankings apply to both new construction and modernization.

<u>Priority</u>	<u>General Hospitals</u>	<u>Long-Term Care Facilities</u>
A	0 - 25%	0 - 25%
B	26 - 50%	26 - 50%
C	51 - 75%	51 - 75%
D	76 - 99%	76 - 99%
E	100%	100%

The area priority list, in the general hospital category for modernization, reveals that there are ten (10) service areas in the State in the "A" priority group with a relative need of zero percent met. Due to the very limited Federal funds available to Montana for modernization and the number of applicants for these funds, problems arise in determining which applications the Facilities Committee will select to recommend to the State Board of Health and Environmental Sciences for inclusion in the Project Construction Schedule.

An attempt has been made in this revision of the Plan to add a priority modification to those service areas having zero percent need met. At present, this applies in the general hospital category for modernization only and adds the new term "priority rank." The purpose of the priority modification is twofold: (1) for guidance in the allocation of Federal grants and (2) as a timetable for sponsors of modernization projects as to when they might expect to receive Federal grants.

Federal Law and Regulations state that the State Agency shall determine the priority of projects based on relative need of different areas lacking adequate facilities of various types for which assistance is available, giving special consideration to (1) hospitals which will serve rural communities and areas with relatively small financial resources and (2) for modernization of facilities serving areas of high population density.

Emphasis has been placed on the construction of hospitals in rural areas since the inception of the hospital construction program in 1947. The only remaining service area without hospital facilities is Powder River County and therefore, construction of new hospitals in rural areas no longer presents a problem.

It is recognized that Montana does not have large metropolitan areas as do other states, but nevertheless, the need for modernization of existing hospitals in the larger urban areas of the State does exist. The priority modifications in the top priority group takes four factors into account:

1. Relative need, percent of need met.
2. Population density.
3. Number of beds to be modernized.
4. Per capita income.

The first factor takes into account the ten (10) service areas having "zero percent of need met." Since these are all the same, no rank is assigned. Rank No. 1 is assigned to the service area having the next lowest percent of need met.

The second factor, "Population Density", assigns Rank No. 1 to the service area having the highest population density.

The third factor, "Number of Beds to be Modernized", assigns Rank No. 1 to the service areas having the greatest number of beds to be modernized.

The fourth factor, "Per capita Income" assigns Rank No. 1 to the service area having the lowest per capita income.

The ranks of the factors are added for each service area and the sum of the ranks are then used for the final priority ranking, with the lowest priority rank having the greatest priority.

It is recognized that this priority modification is not all-inclusive and that other factors should be considered. For example, facilities classified "non-conforming" under Part A might possibly rank lower than facilities classified "non-conforming" under Parts B, C, and D. Also taking life safety into account, it would appear the "non-conforming" facilities under Part A, not having automatic sprinkler systems should have Rank No. 1 over those having such systems.

The Montana State Department of Health and Environmental Sciences will continue to study and make refinements in the priority modification system now being introduced. This method is being used only in the general hospital modernization category at present and will be extended to other categories as the need arises.

2. Outpatient Facilities

The Public Health Service Regulations defines an outpatient facility as "a facility providing community service for the diagnosis and treatment of ambulatory patients (outpatients), which is operated in connection with a hospital, or in which patient care is under the professional supervision of persons licensed to practice medicine or surgery in the State, or, in the case of dental diagnosis or treatment, under the professional supervision of persons licensed to practice dentistry in the State. This includes outpatient departments and clinics of public or nonprofit hospitals." For purposes of planning adequate services, it is accepted that the basic minimum facility to be classified as an "outpatient facility" must include a clinical laboratory and x-ray.

It is recognized that every physician's office is primarily an outpatient facility which may be adequate for the need of many patients depending on the nature and seriousness of the illness; however, the need for the use of more complicated modern equipment for exact diagnosis is becoming increasingly more important. Exact information is not available regarding the extent to which basic services are available in the physicians' offices throughout the State, since they were not included in the inventory of existing centers. Such services will, however, be taken into consideration in planning new facilities.

In Montana most of the population is concentrated in the urban centers with considerable distance between the smaller towns. Because of the sparsely populated rural areas, it is felt that the general hospital service areas are suitable for consideration of available and needed outpatient services. There are existing acceptable community hospitals in all areas where basic x-ray and laboratory services are available for outpatient use on an unorganized basis. Such facilities are not included in the inventory of outpatient facilities as giving "significant" service since complete statistics are not available, and "significant" is a relative measure depending on the demand for service. However, since many of the rural hospitals are new, their facilities appear to be adequate for basic services. Other services are referred to the larger hospitals.

There are thirteen (13) general hospitals in intermediate hospital service areas which have acceptable organized outpatient clinics. Ten (10) of these facilities offer therapeutic x-ray services.

The Public Health Service Regulations require that outpatient facilities shall be planned in sufficient number to make at least the basic minimum services readily available to all persons in the State. Provision of the basic minimum services requires facilities for examination of patients by a physician or a dentist, and the provision of clinical laboratory and diagnostic x-ray services.

In accordance with the Public Health Service Regulations, outpatient facilities are to be distributed to facilitate the necessary relationship between hospitals and outpatient facilities. The outpatient facilities are planned in the same areas used for distribution of general hospitals and facilities for long-term care.

In determining the need for additional outpatient facilities, special consideration will be given to areas in which there is a shortage of services provided by private physicians and dentists.

The Public Health Service Regulations state that for new construction, the priority of outpatient facility projects shall be determined on the basis of relative need for additional outpatient facilities in the area to be served by the project taking into account existing available services and their utilization.

It is recognized that there may be a need for outpatient facilities in outlying areas of the State; however, no specific areas are designated in this Plan. Basic considerations used in determining priority factors are as follows:

1. the availability of outpatient facilities in hospitals throughout the State.
2. the extent to which services are available in local physicians' and dentists' offices.
3. the extension of laboratory, pathological and x-ray services of the larger hospitals to the smaller hospitals and local physicians.

4. the availability of professional staff in the urban centers.
5. the ability of the larger hospitals to finance and operate multi-service centers.

Relative need will be determined within the following general categories:

Group A - Service areas with no suitable outpatient facilities.

Group B - Intermediate areas with a hospital which needs an acceptable outpatient department.

Group C - General hospitals in need of additional outpatient facilities for expanded and/or additional services.

Group D - Areas where no additional organized services are needed.

Prior to approval of any application, need for the facility must be established by supporting information covering all existing outpatient services (including those in private offices) available in the communities and justification for additional facilities. Applications for construction projects will be considered in order of their relative priority group.

As other needs develop, a more detailed priority schedule can be developed on an area or regional basis.

For modernization, the priority is determined by the ratio of existing conforming outpatient facilities in such areas. On this basis, the priority ranking is:

<u>Priority</u>	<u>Percent Need Met</u>
A	0 - 25%
B	26 - 50%
C	51 - 75%
D	76 - 99%
E	100%

3. Tuberculosis Hospitals

The Public Health Service Regulations state that the number of beds required to provide adequate hospital services for tuberculosis patients shall be determined by dividing the current average daily census of each hospital by 0.90 (occupancy factor).

The Galen State Hospital (formerly the State Pulmonary Disease Hospital) at Galen has 170 beds in operation with an occupancy rate of 66%. This occupancy rate includes those patients with silicosis and chronic chest diseases as well as tuberculosis patients.

The reportable cases of active and probably active tuberculosis has declined steadily in each of the past several years and the State Agency does not anticipate a need for additional beds or facilities. For this reason, no priority system for the expenditure of Federal funds for this category has been prepared and the relative need report has been omitted.

4. Mental Health Facilities

The Public Health Service Regulations state that the State Plan developed under the Community Mental Health Centers Act, Public Law 88-164, and regulations thereunder, shall constitute that portion of the Plan for mental health services, beds and facilities required under the Federal Act (Hill-Burton Program).

Public Law 88-164 and the 1967 amendments contain nonduplication provisions for the construction of Mental Health Centers and Facilities for the Mentally Retarded. Hill-Burton funds may therefore not be used to assist in construction of a Community Mental Health Center project, or a portion thereof, as described in the legislation, within the State when funds are available for such projects from the State's allotment under Public Law 88-164, and the 1970 amendments, (PL 91-211, March 13, 1970). Instances may occur, however, where funds are not available for mental health projects under Public Law 88-164, and the 1970 amendments, in which the commitment of Hill-Burton funds to such a project by the approval of the application may be legal and appropriate.

5. Public Health Centers

A Public Health Center is defined as a publicly owned facility utilized by a local health unit for the provision of public health services, including related publicly owned facilities such as laboratories, clinics, and administrative offices operated in connection with public health centers.

A local health unit is a single county, city, county-city, or local district unit where the primary function of the State district unit is the direct provision of public health services to the population under its jurisdiction.

The Public Health Service Regulations state that the number of public health centers to be planned in the State shall be adequate to meet the needs of the people of the State. The need shall be determined after consultation with the State Department of Health and Environmental Sciences and with local health departments where such departments are operating independent units. The general method of distribution of public health centers throughout the State shall conform to the plan of organization of local health units within the State.

Highest priority in this category will be given to the provision of facilities for local health units serving rural communities and

communities with relatively small financial resources. Each application for construction of a public health center or local health office will be evaluated as to staffing and program to be provided.

6. Rehabilitation Facilities

The Public Health Service Regulations define a rehabilitation facility as:

(1) A facility providing community service which is operated for the primary purpose of assisting in the rehabilitation of disabled persons through an integrated program under competent professional supervision of (a) medical evaluation and services, and (b) psychological, social, or vocational evaluation and services. The major portion of the required evaluation and services must be furnished within the facility; and the facility must be operated either in connection with a hospital or as a facility in which all medical and related health services are prescribed by, or are under, the general direction of persons licensed to practice medicine or surgery in the State.

(2) For the purpose of this paragraph:

(a) An integrated program brings together a team of specialized personnel from the (1) medical, and (2) psychological, social, or vocational areas for the purpose of pooling information, interpretations and opinions for the development of a rehabilitation plan of services in which the disabled individual is viewed as a whole. When members of the team contribute to the diagnosis and treatment of illness, their contributions must be coordinated under medical responsibility. These integrated services may be provided in a facility to care for many types of disabilities or a single type of disability.

(b) A disabled person is an individual who has a physical or mental condition which, to a material degree, limits, contributes to limiting, or if not corrected, will probably result in limiting the individual's performance or activities to the extent of constituting a substantial physical, mental, or vocational handicap.

(c) Medical service, in the case of a rehabilitation facility operated in connection with a hospital, means a service under the direct personal supervision of a medical director, varied and extensive availability of specialized consultant, physical and occupational therapy services, and medical evaluation.

(d) Medical service, in the case of a rehabilitation facility not operated in connection with a hospital, means medical supervision, availability by agreement of medical consultants, and evaluation and services suitable to the needs of the disabled persons to be served.

(e) Social service means evaluation and services by a qualified social worker in scope and variety appropriate to the rehabilitation needs of the disabled persons to be served.

(f) Psychological service means evaluation and services by a qualified psychologist in scope and variety appropriate to the rehabilitation needs of the disabled persons to be served.

(g) Vocational service, in the case of a rehabilitation facility operated in connection with a hospital, means evaluation and services by a qualified vocational rehabilitation counselor in scope and variety appropriate to the rehabilitation needs of the disabled persons to be served.

(h) Vocational service, in the case of a rehabilitation facility not operated in connection with a hospital, means those vocational services required in hospitals plus a variety of vocational services appropriate to the program and the persons to be served, such as prevocational exploration, work evaluation, and vocational training.

The Public Health Service Regulations state:

"(a) Rehabilitation facilities shall be planned by each State so that all persons in the State shall have access to integrated rehabilitation services for all types of disabilities. The facility or facilities may be programmed in the State or by joint planning with one or more other states to serve the residents of such states. In determining the number of rehabilitation facilities and services needed, the State shall consider such factors as the particular needs of the population to be served and the scope and nature of services of the existing and proposed facilities."

The Public Health Service Regulations further state:

"In determining the need for additional rehabilitation services as a basis for distribution of rehabilitation facilities, consideration shall be given to (a) rehabilitation services provided in existing facilities, avoiding duplication and overlapping of services; and (b) availability of rehabilitation services to people in all geographical areas."

The distribution of rehabilitation facilities is programmed on a statewide basis, the number, size, and type and location, depending upon consideration of the following factors:

1. Availability of medical, para-medical, and other professional or trained personnel to provide the necessary evaluation and services.
2. The extent to which various types of disabilities will be provided for.
3. The extent to which the facility will be available for teaching purposes.

PRIORITY

The Public Health Service Regulations state:

"Priority shall be given to rehabilitation facility projects in the order of importance, as given below, taking into consideration existing rehabilitation services in the community.

(a) Facilities operated in connection with a university teaching hospital which will provide an integrated program of medical, psychological, social, and vocational evaluation and services under competent supervision.

(b) Facilities offering rehabilitation services for multiple disabilities in hospitals and medical facilities capable of sustaining an organized department of physical medicine and rehabilitation.

(c) All other rehabilitation facilities."

While Montana does not have a medical school, or a university teaching hospital, several units of the Montana University System do provide training of para-medical and other professional personnel. Applications for rehabilitation facilities will be considered for Butte, Havre, Helena, Kalispell, and Miles City.

Prior to approval of any application, need for the facility must be established by supporting information covering all existing rehabilitation services in the community to be served and justification for the additional facilities desired.

The 1965 Amendments to the Vocational Rehabilitation Act authorize Federal funds to help construct new rehabilitation centers and workshops. It also assists in the acquisition of existing buildings, and the expansion, remodeling, alteration, and renovation of rehabilitation

facilities and workshops. However, no Federal appropriations have been made for these purposes except for remodeling. Projects may include assistance with the costs of initial equipment and the acquisition of land. This program is administered in Montana by the Rehabilitative Services Division, Department of Social and Rehabilitation Services.

The State Department of Health and Environmental Sciences cooperates with the Rehabilitative Services Division, Department of Social and Rehabilitative Services, in coordinating their program with the Hill-Burton Program.

PRIORITY CRITERIA

The following criteria, established by the Public Health Service, will be weighed in determining the priority of projects:

- (a) Special consideration to projects which will provide comprehensive health care.
- (b) Special consideration to facilities which will provide training in health and allied professions.
- (c) Special consideration to facilities which will provide for the treatment of alcoholism.
- (d) At the option of the State, special consideration to hospitals serving rural communities.
- (e) Special consideration to outpatient facilities in poverty areas.

POVERTY AREAS

In order to determine priorities for construction or modernization of outpatient facilities and establishing a Federal share for those projects (not to exceed 90% of the cost of construction), the State Agency has designated Poverty Areas. For purposes of this Plan, "area" means a service area, or a sub-service area, designated in this Plan as providing the basis for the provision of outpatient services.

Poverty areas are determined to be those counties in which the median family income ranks in or below the 20th percentile of the median family incomes for all counties in the State. In the event one (1) county of a multi-county service area falls in the poverty level, that county is considered a sub-service area.

Following is a list of all counties in the State, along with the 1969 Median Family Income as generated by the 1970 census. Those counties designated as Poverty Areas are so indicated.

	<u>Service Area</u>	<u>Median Family Income</u>
R-1	Lincoln County	\$ 9,711
R-2	Flathead County	8,567
R-3	Sanders County	7,839
R-4	Lake County	6,786 (Poverty Area)
R-5	Mineral County	8,495
R-6	Ravalli County	7,137
I-1	Missoula Intermediate	9,066
R-7	Glacier County	7,654
R-8	Toole County	8,500
R-10	Pondera County	7,693
R-11	Teton County	8,203
I-2	Great Falls Intermediate	
	Cascade County	8,955
	Chouteau County	8,700
I-3	Havre Intermediate	
	Hill County	8,923
	Blaine County	6,785 (Poverty Area)
	Liberty County	8,600
R-12	Beaverhead - Madison Counties	
	Beaverhead County	7,923
	Madison County	6,783 (Poverty Area)
R-13	Gallatin County	8,833
I-4	Helena Intermediate	
	Lewis & Clark County	10,277
	Broadwater County	7,038
	Meagher County	6,926 (Poverty Area)
	Jefferson County	8,525

	<u>Service Area</u>	<u>Median Family Income</u>
I-5	Butte Intermediate	
	Deer Lodge County	8,275
	Silver Bow County	8,671
	Granite County	7,132
	Powell County	8,446
R-17	Park County	7,659
R-14	Fergus, Petroleum, Judith Basin Counties	
	Fergus County	8,299
	Petroleum County	7,315
	Judith Basin County	7,155
R-15	Wheatland - Golden Valley Counties	
	Wheatland County	7,467
	Golden Valley County	7,389
R-16	Musselshell County	6,763 (Poverty Area)
R-18	Sweet Grass - Stillwater Counties	
	Sweet Grass County	6,530 (Poverty Area)
	Stillwater County	6,752 (Poverty Area)
R-19	Carbon County	6,578 (Poverty Area)
R-20	Big Horn County	7,310
I-6	Yellowstone Intermediate	8,966
R-9	Phillips County	7,231
R-21	Valley County	8,191
R-22	Daniels County	7,754
R-23	Sheridan County	8,605
R-24	Roosevelt County	7,955
R-25	Garfield County	6,657 (Poverty Area)
R-26	Richland County	7,767
R-27	Dawson, McCone, Wibaux Counties	
	McCone County	8,339
	Dawson County	9,133
	Wibaux County	7,300
R-28	Rosebud - Treasure Counties	
	Rosebud County	6,717 (Poverty Area)
	Treasure County	6,955 (Poverty Area)

	<u>Service Area</u>	<u>Median Family Income</u>
R-29	Powder River County	7,965
R-30	Fallon - Carter Counties	
	Fallon County	8,888
	Carter County	8,607
I-7	Custer - Prairie County Intermediate	
	Custer County	8,373
	Prairie County	7,366

SERVICE AREAS

1. Service areas for planning have been established on the basis of socio-economic factors, trade areas, transportation systems including time distance factors, geographic features, and existing patterns of medical care. Area boundaries coincide with political areas.

This revision continues the thirty-seven (37) service areas for planning general hospital, long-term care, and outpatient facilities. These are designated as rural and intermediate areas, consisting of thirty (30) rural areas and seven (7) intermediate areas.

The original State Plan, in 1948, provided for twenty-four (24) rural areas and six (6) intermediate areas. At that time, an intermediate area was required by Federal regulations to have a total population of at least 25,000 and upon completion of the construction program under the State Plan to have at least one general hospital with a complement of 100 or more beds. To meet the population requirements for an intermediate area, it was necessary to combine several counties without regard to medical care patterns.

The State Department of Health and Environmental Sciences will continue to study area boundaries and propose changes, when needed, to accurately reflect shifts in population, new transportation arteries, and other significant factors.

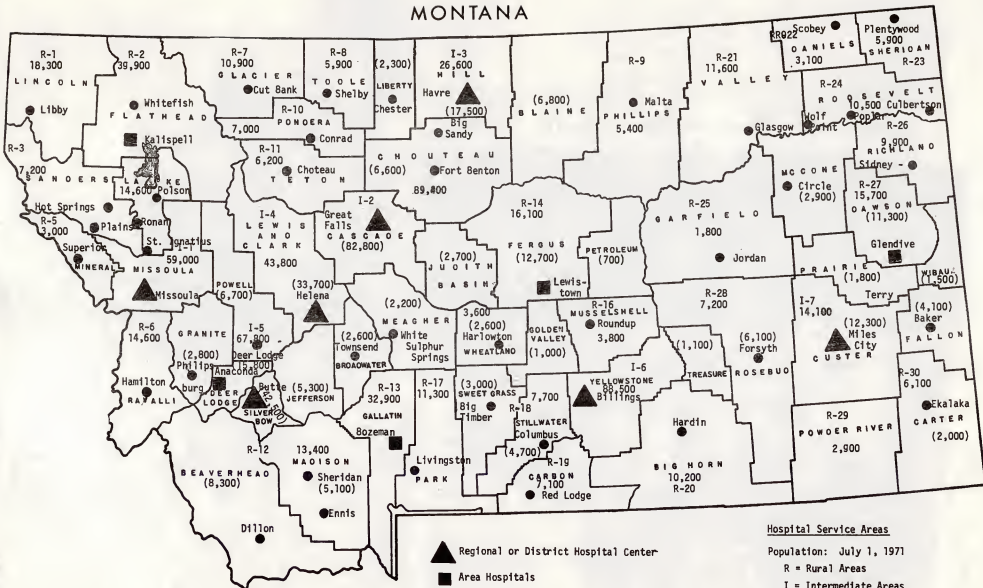

2. The service areas for long-term care are the same as for general hospitals and for outpatient facilities; however, political organization requires planning for public health centers by separate counties or by city-county combinations.

3. Tuberculosis hospitals are on a statewide basis. This has also been true for mental facilities; however, these facilities are now being planned on a regional basis. Rehabilitation facilities are also being planned on a regional basis.

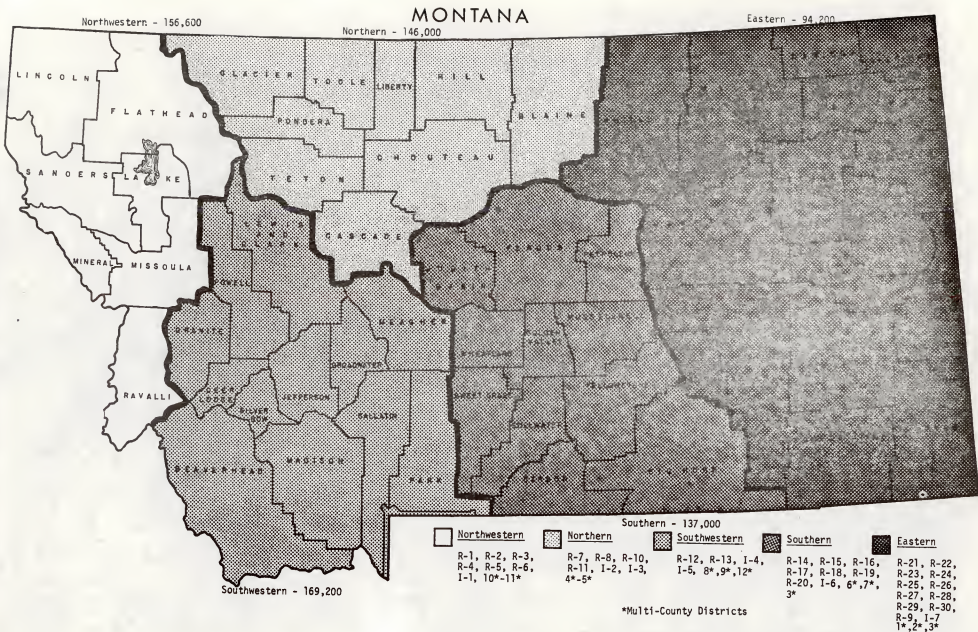

4. The general hospital, long-term care, and outpatient facilities service areas are shown on the map on page 49. In addition to these, the State has been divided into regions for purposes of planning total health and related facilities. These regions, with minor boundary adjustments, are also used for the planning of community mental health centers and for facilities for the mentally retarded. The regional map is shown on page 50.

5. These service areas and regions coincide with or group several of the Multi-County Planning Districts as recommended by the Governor.

I = Intermediate Areas

PLANT RATING TECHNIQUE

For each hospital there is on file a Summary Worksheet, the data for which is taken from checklists corresponding with the breakdown on the inventories: Parts A and B as evaluations of complete buildings, Part C as a measure of "conforming" and "non-conforming" beds in individual nursing units, and Part D as a measure of selected but essential service departments.

Part A, in a sense, reflects the "suitable" and "unsuitable" ratings of the past. Each consecutive addition (building, wing, or unit) of the hospital is rated as to whether it is "obviously unsuitable for hospital and medical purposes." The emphasis is upon meeting fire-resistive standards, failing which, that unit of the hospital and all its beds are rated "non-conforming."

Part B reflects safety of structure. Scoring is arranged so that buildings with certain combinations of deficiencies are considered "non-conforming." In such cases, all beds in the affected unit are classified as "non-conforming."

Assuming the particular building unit has not been disqualified under Part A, the nursing units, per se, are then examined to determine the suitability of individual patient rooms. All beds in any room that fail to meet criteria, all of which are given equal weight, are rated "non-conforming." The disqualifications include: (1) lack of nurses' call device available to each bed, (2) inadequate floor area per bed, (3) lack of windows, (4) lack of direct access to corridor, (5) opening onto a corridor less than seven feet wide, (6) lack of access to an elevator, (7) below grade level, (8) lack of access to nurses station or utility room, and (9) lack of access to toilet, bedpan, bath, or handwashing facilities.

In approaching this particular evaluation, the new definition of bed capacity is used and not necessarily the hospital's own count of beds nor the licensed bed figure.

Part D evaluates key service departments to determine deficiencies in physical plant which affect departmental functions. Where the survey proved that the service departments are "non-conforming," fifty percent of all beds found "conforming" under the three prior evaluations are thereby listed "non-conforming."

The purpose of the plant evaluation is to establish a uniform basis among the states and relative need in the various areas within each State as a basis for priority ranking.

Modernization is the obvious solution for correcting deficiencies in service departments. This becomes an important factor in determination of priority.

POPULATION

The Public Health Service Regulations require that the latest figures of civilian population, certified by the Federal Department of Commerce, be used for planning purposes and that such population be distributed among the various areas. This also applies to the projected population.

According to the U.S. Bureau of Census, in their Series P-25, No. 468, October 5, 1971, the provisional estimate of civilian population for Montana, as of July 1, 1971, is 703,000, with a projected civilian population as of 1978 of 714,000.

This same publication estimates a population, aged 65 and over, as 70,000 on July 1, 1971, projected to 75,000 in 1978.

DETERMINATION OF BED NEED

I. General Hospitals

The method adopted to determine bed need is in accordance with the procedure established in Form PHS 708-2, as follows:

- A. Multiply the current use rate (annual patient days per 1,000 of area population) by projected area population and divide by 365 to obtain the projected average daily census.
- B. Divide the projected average daily census by .85 (occupancy factor) and add 10 to obtain the number of beds for the area.

II. Long-Term Care Facilities

- A. Same as in A. above, substituting population figures for aged 65 and over.
- B. Same as in B. above, except use of .90 as the occupancy factor instead of .85.
- C. Use rate of 10,941 is minimum State average. (Patient days divided by population over 65.)
- D. Use rate of 7,918 is minimum State average. (Patient days divided by population over 65.)
- E. Use rate of 1,198 is minimum State average. (Patient days divided by population over 65.)

III. Tuberculosis Hospitals

The Statewide bed need was determined by the Public Health Service formula using the current average daily census divided by 0.90 (occupancy factor).

IV. Mental Facilities

For purposes of this Plan, the bed needs were determined by the Public Health Service formula using the current average daily census divided by 0.90 (occupancy factor). Also, refer to the 1969 Montana State Plan for Community Mental Health Centers Construction, as amended.

AREA NARRATIVE:

R-1 - LINCOLN COUNTY This service area consists of Lincoln County only, with Libby the largest community in the area being the County Seat. Industry is chiefly logging and related wood industries with some limited mining. The area is mountainous with adequate transportation routes by both highway and railroad.

Libby Dam, begun in 1966, is still under construction. This has necessitated relocation of the railroad and several highways in the area. About 1,500 workers are on site in 1972. The project should be completed in 1973. Hospital occupancy has remained constant during the construction period but with a notable increase in outpatient and emergency work.

- 1/ Population aged 65 and over
2/ Use rate of 10,941 is minimum State average (Patient Days divided by 70)
3/ Use rate of 7,918 is minimum State average (Patient Days divided by 70)
4/ Use rate of 1,198 is minimum State average (Patient Days divided by 70)

AREA NARRATIVE: R-2 - FLATHEAD COUNTY								

AREA NARRATIVE:

R-2 - FLATHEAD COUNTY - This service area consists of Flathead County. The largest communities are Kalispell (County Seat), Whitefish and Columbia Falls. The major industries are logging, wood products, agriculture, fruit growing and livestock. This is a major recreational area providing water sports, fishing, hunting, skiing, etc., with many summer homes located on the shores of Flathead and Whitefish lakes. The west entrance to Glacier National Park is only 16 miles from Columbia Falls. The moderate climate and beautiful scenery encourage many persons to retire in this area which accounts for the large numbers of persons over 65. Highways and railroads follow the mountain valleys. Due to the construction of Libby Dam, the relocation of 59 miles of the Burlington-Northern railroad and the construction of a 7.7 mile long tunnel has been accomplished.

Hospitals in the area have, generally, shown an increase in both admissions and patient days. The new North Valley Hospital at Whitefish is now completed and in operation. This facility services the area from Eureka to Whitefish, east to Columbia Falls, which is the location of the Anaconda Aluminum plant, Hungry Horse Dam and the West Entrance to Glacier National Park. Due to the high risk industries in the area, consideration is being given to the provision of rehabilitation services, probably at Kalispell General Hospital.

^{1/} Population aged 65 and over

^{2/} Use rate of 10,941 is minimum State average (Patient Days divided by 70)

^{3/} Use rate of 7,918 is minimum State average (Patient Days divided by 70)

^{4/} Use rate of 1,198 is minimum State average (Patient Days divided by 70)

AREA NARRATIVE:

R-3 - SANDERS COUNTY This service area consists of Sanders County only, with Thompson Falls the County Seat. Other communities are Plains and Hot Springs. Industry, in general, is limited to logging and related wood products. The area consists of some of the most rugged terrain in the United States, with adequate transportation routes following the mountain valleys.

The new Clark Fork Valley Hospital at Plains has been completed and is in operation.

^{1/} Population aged 65 and over.

^{2/} Use rate of 10,941 is minimum State average (Patient Days divided by 70).

AREA NARRATIVE:

R-4 - LAKE COUNTY. This service area consists of Lake County only, with Polson the County Seat. Other communities are Ronan and St. Ignatius. This is mountainous country with most of Flathead Lake and the Flathead Indian Reservation within the county boundaries. Highways are good and the scenic beauty attracts many retired persons to locate here -- particularly on the east shore of Flathead Lake. Chief industries are logging and wood products, agriculture, dairying, fruit growing and livestock. This is also a prime recreational area for boating, fishing, camping, etc.

The new 80 bed St. Joseph's Nursing Home in Polson has been completed and is in operation

^{1/} Population aged 65 and over.

^{2/} Use rate of 10,941 is minimum State average (Patient Days divided by 70)

AREA NARRATIVE

R-5 - MINERAL COUNTY. This service area consists of Mineral County only with Superior the County Seat. This is mountainous area with the highways and railroads following the mountain valleys. A trans-continental railway does not provide local passenger service. Seventy-eight miles of the heavily traveled trans-continental Interstate 90 cross the county and serve more than two million travelers per year. This heavy traffic, combined with the mountainous terrain and inclement weather, contribute to a large number of vehicular accidents.

The hazardous logging industry in the area, along with the tourist travel impose special problems on the non-conforming hospital at Superior which is programmed for replacement with 10 acute medical-surgical beds and 20 skilled nursing beds.

Bed need has been adjusted to 10 beds, pending more valid patient data, generated by the arrival of a new resident physician and to 20 beds for skilled nursing care, due in part to the 80% occupancy of the currently licensed 12 beds.

^{1/} Population aged 65 and over

^{3/} Use rate of 7,918 is minimum State average (Patient Days divided by 70)

^{4/} Use rate of 1,198 is minimum State average (Patient Days divided by 70)

AREA NARRATIVE:

R-6 - RAVALLI COUNTY This service area consists of Ravalli County only with Hamilton the County Seat. Important industries are logging and related wood industries, agriculture, livestock, and fruit growing. The Rocky Mountain Laboratory of the U. S. Public Health Service is located at Hamilton. The area consists of a fertile valley between two mountain ranges, with the highway and railroad (which does not provide passenger service) following the valley. The railroad terminates at Darby. The mild climate and scenic country make this an attractive area for retired persons.

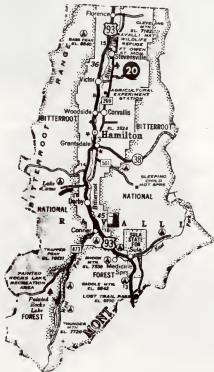

The Marcus Daly Hospital at Hamilton is programmed for replacement with 28 beds to be added. The adjustment of 13 beds is required due to a shorter than average patient stay which indicates that patients may be being discharged sooner than warranted in order to make beds available for new patients. This adjustment has been verified by an independent study conducted by Hamilton Associates, Consultants of Minneapolis, Minnesota.

The new North Valley NH (57 beds) at Stevensville is open.

^{1/} Population aged 65 and over

^{2/} Use rate of 10,941 is minimum State average (Patient Days divided by 70)

AREA NARRATIVE:

I-1 - MISSOULA INTERMEDIATE. This service area consists of Missoula County only with the City of Missoula being the County Seat and also the trade and medical center for western Montana. Missoula is also the site of the University of Montana and of the U.S. Forest Service. The area is mountainous with excellent transportation routes.

There are three hospitals in Missoula - St. Patricks, Missoula General (non-conforming) and Missoula Community, a new 105 bed facility at the Old Fort Missoula. A 58 bed nursing home is under construction on the same site.

- 1/ Population aged 65 and over.
- 2/ Use rate of 10,941 is minimum State average (Patient Days divided by 70)
- 3/ Use rate of 7,918 is minimum State average (Patient Days divided by 70)
- 4/ Use rate of 1,198 is minimum State average (Patient Days divided by 70)

AREA NARRATIVE:								

R-7 - GLACIER COUNTY This service area consists of Glacier County only with Cut Bank the County Seat. The area contains the Blackfeet Indian Reservation and extends from the Eastern Slope of the Continental Divide to the beginning of the Great Plains region. Principal industries are agriculture and livestock and petroleum production and refining. The area is served by adequate highway and railway routes. Other communities are Browning, location of the Indian Agency and East Glacier, the Eastern entrance to Glacier National Park.

Glacier County Memorial Hospital at Cut Bank is programmed for replacement. The U. S. Public Health Service operates a small hospital for the Indian population at Browning.

^{1/} Population aged 65 and over.

^{2/} Use rate of 10,941 is minimum State average (Patient Days divided by 70)

^{4/} Use rate of 1,198 is minimum State average (Patient Days divided by 70)

AREA NARRATIVE:

I-2 - GREAT FALLS INTERMEDIATE. This service area consists of Cascade County (Great Falls the County Seat) and Chouteau County (Fort Benton the County Seat). Great Falls is the major trade and medical center for the northern portion of Montana. The area has many diversified industries including agriculture, livestock, smelting, flour milling, oil refining and manufacturing. Located at Great Falls are the College of Great Falls, the smelter and electrolytic plant of the Anaconda Company and the Malmstrom Air Force Base. The Montana Power Company operates a series of dams in this area for the generation of electric power. Transportation is excellent by highway, railroad, and air.

This is the second largest urban area in the State and medical facilities are such that only a few of the most highly specialized disciplines are not available. Included in this area is the Malmstrom Base Hospital, use of which is restricted to Military Personnel and their dependents.

- 1/ Population aged 65 and over.
- 3/ Use rate of 7,918 is minimum State average (Patient Days divided by 70)
- 4/ Use rate of 1,198 is minimum State average (Patient Days divided by 70)

I-3 HAVRE INTERMEDIATE. This service area consists of Hill County (Havre the County Seat), Blaine County (Chinook the County Seat) and Liberty County (Chester the County Seat). The Rocky Boy Indian Reservation is located in Hill County, and much of the Fort Belknap Indian Reservation is in Blaine County. This is relatively flat terrain with good transportation by both highway and railway. Primary industries are livestock, agriculture, and some mining.

The Northern Montana Hospital at Havre is non-conforming and the community is planning to build one new facility as a replacement. The plan calls for inclusion of a number of beds for the Indian population and also some mental health beds. Application has been approved for 7 mental health beds. The nearest Indian Service Hospital is located at Fort Belknap, some 45 miles distant.

- ^{1/} Population aged 65 and over.
^{4/} Use rate of 1,198 is minimum State Average.
(Patient Days divided by 70)

R-12 - BEAVERHEAD-MADISON COUNTIES. This service area consists of Beaverhead County (Dillon the County Seat) and Madison County (Virginia City the County Seat). This is mountainous country with generally good transportation routes. Principal industries are agriculture, livestock, mining and, because of its proximity to Yellowstone National Park, tourism. The area is nationally known for its hunting and fishing.

Other communities are Sheridan, Ennis, and Twin Bridges. The Western Montana College is located at Dillon.

The new 28-bed Barrett Hospital at Dillon is completed and in operation.

- 1/ Population aged 65 and over.
- 2/ Use rate of 10,941 is minimum State average (Patient Days divided by 70).
- 4/ Use rate of 1,198 is minimum State average (Patient Days divided by 70).

AREA NARRATIVE:

R-13 - GALLATIN COUNTY. This service area consists of Gallatin County only with Bozeman the County Seat. The area is mountainous with many fertile valleys which are traversed by the highways and railroads forming a good transportation pattern. Primary industries are agriculture, livestock, logging and lumber products, mining, dairy products and some manufacturing. Montana State University is located at Bozeman.

The Three Forks Nursing Home and Hillcrest Health Center have changed to Personal Care. The Florence Convalescent Home is now the Bozeman Convalescent Center.

^{1/} Population aged 65 and over.

^{2/} Use rate of 10,941 is minimum State average (Patient Days divided by 70

AREA NARRATIVE:

1-4 HELENA INTERMEDIATE This service area consists of Broadwater County (Townsend-County Seat), Jefferson County (Boulder-County Seat), Lewis & Clark County (Helena-County Seat) and Meagher County (White Sulphur Springs-County Seat). This is mountainous area with good transportation by highway, railroad and air. Helena is the trade and medical center for the area and is the location of the State Capitol, Carroll College and numerous State and Federal offices. The American Smelting and Refining Company and the Anaconda Company operate plants in East Helena. Principle industries are agriculture, livestock, meat processing, smelting, oil products distribution, mining, lumbering and some manufacturing.

The Veterans Administration operates a hospital at Fort Harrison, about six miles from Helena.

The Western Care Nursing Home in Helena is complete

1/ Population aged 65 and over.

2/ Use rate of 10,941 is minimum State average (Patient Days divided by 70)

4/ Use rate of 1,198 is minimum State average (Patient Days divided by 70).

AREA NARRATIVE:

I-5 - BUTTE INTERMEDIATE. This service area consists of Silver Bow County (Butte the County Seat), Granite County (Philipsburg the County Seat), Deer Lodge County (Anaconda the County Seat), and Powell County (Deer Lodge the County Seat). This is mountainous country with good transportation by highway, rail and air.

The operations of the Anaconda Company at Butte and Anaconda include mining, smelting and refining. Other industries include agriculture, livestock, meat packing, logging and wood products, and some manufacturing. The Montana College of Mineral Science and Technology is located at Butte which is considered the trade and medical center of the area.

State hospitals in the area which serve on a State-wide basis are the Galen and Warm Springs State Hospitals.

- 1/ Population aged 65 and over.
- 2/ Use rate of 10,941 is minimum State average (Patient Days divided by 70)
- 3/ Use rate of 7,918 is minimum State average (Patient Days divided by 70)
- 4/ Use rate of 1,198 is minimum State average (Patient Days divided by 70)

AREA NARRATIVE:

R-14 - FERGUS, PETROLEUM AND JUDITH BASIN COUNTIES. This service area consists of Fergus County (County Seat - Lewistown), Judith Basin (County Seat - Stanford) and Petroleum County (County Seat - Winnett). The livestock industry is the economic backbone of this area. The area is served by the hospital at Lewistown, which is scheduled for replacement. The Montana Center for the Aged at Lewistown does not provide a community service since all residents must first be legally committed to the Warm Springs State Hospital and then transferred to Lewistown.

Population aged 65 and over.
Use rate of 7,918 is minimum State average
(Patient Days divided by 70).

Boarding Home	1.675 ^{1/}	1.8 ^{1/}	----	1,198 ^{4/}	5.91	17		

AREA NARRATIVE:

R-17 - PARK COUNTY This service area consists of Park County only, Livingston the County Seat. This is a change in the service area which previously included Sweetgrass County. The division became necessary to comply with the "Multi-County Planning Districts", established by the Governor as part of the reorganization of the State Government. This area is mountainous, served by good highways and railroads. The main industries are agriculture, livestock, logging, mining, and tourism. Many "dude" ranches are located in this area. Livingston is the Northern Gateway to Yellowstone National Park.

Livingston Memorial Hospital is scheduled for modernization.

^{1/} Population aged 65 and over.

^{2/} Use rate of 10,941 is minimum State average (Patient Days divided by 70)

^{4/} Use rate of 1,198 is minimum State average (Patient Days divided by 70)

AREA NARRATIVE:

R-18 - SWEETGRASS AND STILLWATER COUNTIES. This service area consists of Sweetgrass County (Big Timber the County Seat) and Stillwater County (Columbus the County Seat). This is a change in the service area, Sweetgrass County previously being in the service area with Park County. This division became necessary to comply with the "Multi-County Planning Districts" established by the Governor as part of the reorganization of the State Government. The area has mountains, valleys, and rolling terrain and is served by good highways and the railroad. Prime industries are mining, agriculture, livestock, and the manufacture of wood products.

- 1/ Population aged 65 and over.
- 2/ Use rate of 10.941 is minimum State average (Patient Days divided by 70)
- 4/ Use rate of 1,198 is minimum State average (Patient Days divided by 70)

AREA NARRATIVE:

I-6 YELLOWSTONE INTERMEDIATE. This service area consists of Yellowstone County only with Billings the County Seat. This area ranks highest in population of all areas in the State. The area has rolling terrain with excellent transportation facilities by railroad, highway, and air. The area sustains diversified sugar refining, oil refining, trucking and manufacturing.

Billings is the trade and medical center for South Central Montana and Northern Wyoming. It is the location of Eastern Montana College and Rocky Mountain College.

The Montana Center for Handicapped Children is being replaced and the Community Mental Health Center is under construction.

AREA NARRATIVE:

R-21 - VALLEY COUNTY This service area consists of Valley County only with Glasgow the County Seat. This is relatively flat country with good transportation by highway, railway, and air. Industry is primarily agriculture, livestock raising and the generation of electric power from the Fort Peck Reservoir. A large portion of the Fort Peck Indian Reservation is located in this county.

The Air Force Base at Glasgow is being at least partially reactivated.

^{1/} Population aged 65 and over.

^{3/} Use rate of 7,918 is minimum State average (Patient Days divided by 70)

^{4/} Use rate of 1,198 is minimum State average (Patient Days divided by 70)

AREA NARRATIVE:

R-29 - POWDER RIVER COUNTY This service area consists of Powder River County only with Broadus, the County Seat. This is a plains area, sparsely populated, served by highway only. Primary industries are agriculture, livestock and oil production.

There are no medical facilities in the County. The nearest hospital to Broadus is at Miles City, 80 miles to the north, to the east is Belle Fourche, South Dakota, 95 miles; to the south is Gillette, Wyoming, 90 miles and Hardin to the west, 125 miles.

A projected bed need for the area has been adjusted to program a 10-bed hospital with an 18-bed skilled nursing unit.

- 1/ Population aged 65 and over
- 2/ Use rate of 10,941 is minimum State average (Patient Days divided by 70)
- 3/ Use rate of 7,918 is minimum State average (Patient Days divided by 70)
- 4/ Use rate of 1,198 is minimum State average (Patient Days divided by 70)

* State average usage rate.

AREA NARRATIVE:

I-7 CUSTER-PRAIRIE COUNTY INTERMEDIATE This service area consists of Custer County (Miles City - County Seat) and Prairie County (Terry - County Seat). This is plains area with good transportation by highway, railroad and air. Industries are agriculture, livestock raising and marketing, oil production and trucking.

^{1/} Population aged 65 and over
^{4/} Use rate of 1,198 is minimum State average (Patient Days divided by 70)

CHAPTER VII

SUMMARY OF CONSTRUCTION PROGRAM

SUMMARY OF CONSTRUCTION PROGRAM

Under the provisions of Title VI of the Public Health Service Act enacted in 1946, Federal funds have been allocated annually to the states and made available to local public and nonprofit sponsors on a national basis for survey of existing hospitals and for construction of hospitals and public health centers. Part C of the Act pertained to the construction of hospitals and related facilities.

The law required that a single state agency be designated to administer the program and that a State Advisory Council be appointed.

Prior to receiving Federal funds for construction, each state must develop a State Plan for construction based on standards and definitions set forth in the Act and the Public Health Service Regulations, and on specific needs within the State as determined by surveys of existing facilities. It is required that this Plan be revised each year to reflect changing conditions, refinements in planning, and to include all new construction of hospital facilities. This part of the previous Plans under the original Act was referred to throughout the Plan as Part C.

Annual allotments of Federal funds to Montana for hospital construction under Part C have been as follows:

Fiscal Year 1948.	\$231,530
Fiscal Year 1949.	224,137
Fiscal Year 1950.	345,499
Fiscal Year 1951.	200,000
Fiscal Year 1952.	207,113
Fiscal Year 1953.	200,000
Fiscal Year 1954.	200,000
Fiscal Year 1955.	228,439
Fiscal Year 1956.	296,113
Fiscal Year 1957.	342,194
Fiscal Year 1958.	353,850
Fiscal Year 1959.	551,056
Fiscal Year 1960.	598,392
Fiscal Year 1961.	572,790
Fiscal Year 1962.	593,365
Fiscal Year 1963.	587,692
Fiscal Year 1964.	639,078

Public Law 482 of the 83rd Congress (July 12, 1954) amended Title VI of the Public Health Service Act by adding Part G for the construction of diagnostic or treatment centers, chronic disease hospitals, rehabilitation facilities and nursing homes. This part of the previous Plans was referred to throughout the Plan as Part G.

Allotments for construction made available to Montana under Part G of the program for each of the 1955, 1956, 1957, 1958, 1959, 1960, and 1961 fiscal year appropriations were as follows:

Diagnostic or Treatment Centers	\$100,000
Facilities for Chronically Ill	100,000
Rehabilitation Facilities	50,000
Nursing Homes	50,000

Fiscal Years 1962, 1963, and 1964

Diagnostic or Treatment Centers	\$100,000
Facilities for Chronically Ill	100,000
Rehabilitation Facilities	50,000
Nursing Homes	100,000

The Hospital and Medical Facilities Amendments of 1968, Public Law 90-574, extended the program through June 30, 1970, and in addition to new construction, provided for the modernization of hospitals and other medical facilities. The 1970 Amendments, Public Law 91-296 extended the program through June 30, 1973. The amended Act included, in addition to grants, provisions for loan guarantees and/or direct loans to qualified applicants.

Allotments to Montana under the amended Act are:

<u>Grants</u>	<u>1965</u>	<u>1966</u>	<u>1967</u>	<u>1968</u>	<u>1969</u>	<u>1970</u>
